

Kevin J. Baker

ADVISORY SERVICES

Kevin Baker is a Director in Marcum's Advisory Services Practice where he works with the Forensic and Litigation support group. Kevin procures electronic data for preservation and analysis, performs forensically sound examinations of computer systems, related digital media, Internet and e-mail activity in accordance with best-practice procedures. He leverages his extensive experience using forensic software including Guidance Software's EnCase Forensic Edition and AccessData's FTK. Responsible for managing computer forensic cases to completion and authoring reports detailing findings and has often been called upon as an Expert Witness.

Previously, Kevin was an IT Manager with a regional accounting and advisory firm where he would oversee the daily operations of all technology in use including hardware, software and information services. He planned and implemented new technology resources and managed IT clients. In addition, Kevin performed data analysis and production from multiple forms of input including electronic files, paper documents and databases. He also gained experience managing database programming for benefit administration systems organization using MS SQL Server, MS Access and other common database technologies. At that time, Kevin was responsible for preparing training sessions for in-house database systems, managed Year 2000 readiness initiatives and provided technical support for users and computer systems in a call center environment.
